BIG DATA General Reference Architecture: Contents

- Definition (Definition and Taxonomy WG)
- Requirements (Requirements WG)
- Reference Architectures (Architecture WG)
- Capabilities and Gaps (Roadmap WG)

Updated: 07.2013
Definition (Definition and Taxonomy WG)
Big Data Is A Shift In the Way We Consume, Process And Apply Information To Create Intelligence.

Approach:
Take Advantage Of Many Available Data Sources To Expose Hidden Knowledge Lost In Traditional Data Processing

How:
Employing Social Media, Text Processing, Natural Language Processing.. Flexible/Dynamic Database Schemes

While:
Often Bypassing Tradition Tools, Policy And Processes Accelerating Results
BIG DATA Cloud Enterprise Resource Framework: BIG DATA Myths Dispelled

- BIG Data Is A New Idea FALSE
  - In the 1980s It Used to be Called “Distributed Database Management System” (DDBMS)
  - The Techniques Are The Same: Query Load Balancing, Range partitioning, Composite partitioning, Vertical partitioning, Horizontal partitioning (sharding)
- BIG DATA Automatically Discovers New Knowledge FALSE
  - BIG DATA does not auto-magically find new information
  - A data scientist must analyze each data source and programmers must the code for data processing
- BIG DATA Is A Standard FALSE
  - Today, There are NO International Standards for BIG DATA
  - Vendors Claim Apache Hadoop Is a “Defacto Standard”. Unfortunately It Only Works for “Hadoop BIG DATA”
  - BIG DATA May Leverage Other Standards. However, There Are NO Minimum Compliance Profiles for BIG DATA
- BIG DATA Is Cloud Computing FALSE
  - Cloud Computing Is a WAY of Procuring Compute Resources
  - BIG DATA Can Be Deployed On Cloud Infrastructures OR Clusters, Mainframes Traditional Compute Infrastructures
- Map Reduce Is BIG DATA FALSE
  - Map Reduce Is Only One Of Many Cluster Computing, Load Balancing Techniques Used by Some BIG DATA Technologies
  - Map Reduce is NOT a Requirement for BIG DATA
- BIG DATA Provides Multi-Tenant Security FALSE
  - Today, Multi-tenancy Is Not Considered Part Of BIG DATA
- BIG DATA Generates Standard Reports FALSE
  - BIG DATA Technologies Have NO Standards Reports
  - All Reports Must Be Created By Data Scientists and Programmers
- BIG DATA Is Low Cost FALSE
  - Text and Natural Language Processing Can Consumes a High Number of CPU Cycles Driving Up Costs
  - Infrastructures Require Extreme Network Bandwidth Driving Up Costs
  - Text and Natural Language Processing Intermediate Results Is Usually Kept In High Performance Storage Driving Up Costs
  - Technologies Are Extremely Complex and Difficult to Operate Without Procuring Costly Support Contracts
- BIG DATA Is Real Time FALSE (mostly)
  - Real-Time Is Subjective, If Data Processing Meets Delivery Requirements, It Is Real-Time
  - Text and Natural Language Processing Can Take a High Number of CPU Cycles With Unpredictable Completion Times
- BIG DATA The Public Internet FALSE (mostly)
  - Don’t Expect Petabytes of Data Processing to Occur Overnight Using the Public Internet and Low Cost Cloud Computing
  - 1TB of data will take 500-1000hrs to read using a 100mbs network connection. That is 3-6months not including temporary results storage.
  - Many BIG DATA Technologies Cannot Operate In A WAN environment.
BIG DATA General Reference Architecture: Comprehensive Capabilities Taxonomy

- Transforms “Other” Capabilities Formats To A Common Reference Architecture Consumable
- General Systems Capabilities
  - Account Management And Monitoring
  - User Administration And Monitoring
  - Security
  - Federation (Models) Management And Monitoring
  - Configuration (Models) Management And Monitoring
  - Deployment (Models) Management And Monitoring
  - Availability – Metrics And Qualitative Levels (Experimental, Commercial, Mission Critical, Life Critical)
  - Procurement Compliance Management And Monitoring?
  - Maintenance & Diagnostics Management And Monitoring
  - License Management And Monitoring
  - Data Management And Monitoring
  - Supported Ingest Formats
  - Supported Output Formats
  - Supported Devices
  - Supported Interfaces
  - RA and Standards Compliance
  - Performance (Models) Management, Monitoring, Metrics And Qualitative Levels
  - User Support Capabilities- Education, Help Management And Monitoring
  - Vendor Support Capabilities - Maintenance Management And Monitoring
- System Specific Capabilities
  - Data Characterizations (Dynamics, Types of Change, Rate Of Change, Confidence, Quality, Demand)
  - Workload Management And Monitoring
  - Infrastructure Management And Monitoring (Compute Management, Storage Management, Network Management)

Note: Some Capabilities Are Functionally Cross-Cutting

Nearly 500 Detailed Capabilities/Functions Defined
About 25% - 30% Complete
Requirements (Requirements WG)
BIG DATA General Reference Architecture:
Application Profile Landscape

BIG DATA Applications Have Widely Differing Operating Needs

NOTE: Anticipated Application Characterizations (Area for Study i.e. Capabilities Catalog/ Taxonomy Spec.)

Gary Mazzaferro Copyright @AlloyCloud 2011-2012, 2013
Reference Architectures (Architecture WG)
BIG DATA General Reference Architecture: General Reference Architecture Views

- Eco-System
  - Aligns Market Drivers With Solutions And Participants

- Capability
  - Identifies and Aligns System Abilities
  - Facilitate Alignment To Requirements

- Technical
  - Identifies and Aligns Technical Areas
  - Defines Areas of Technical Responsibilities
  - Defines Interface Surfaces
    - Technology Agnostic
    - Data Processing Order Agnostic

- Resource Flows
  - Definition of operational concepts
  - Applying a local context to a capability
  - Allocation of activities to resources

- Deployment
  - Identifies Approaches And Options Surrounding Solution Topology

- Security
  - Aligns Security Approaches And Features With Other RA Models

- May Consider Other Reference Types and Topic Areas
  - RA of Adopted RAs
  - Processes
  - Life Cycles
BIG DATA General Reference Architecture: Ecosystem Viewpoint

Data Sources
- Government (incl. health & financial institutions)
- Industries / Businesses
- Network Operators / Telecom
- Academia

Data Objects
- Variety
- Velocity
- Volume

Data Transformation
- Collection
- Aggregation
- Matching
- Data Mining

Data Infrastructure
- Storage & Retrieval
  - PII
  - Pseudo-anonymized
  - Anonymized

Data Usage
- Network Operators / Telecom
- Industries / Businesses
- Government (incl. health & financial institutions)
- Academia

Updated: Added Slide, 07.2013
BIG DATA General Reference Architecture: Reference Architecture Technical Viewpoint

- Data Storage Infrastructure
- Data Processing Infrastructure
- Data Analytics Infrastructure
- Data Visualization Applications
- Visualization Devices

Security, Capabilities, and Infrastructure Management

Legacy Data, Coalition, US Govt., Partner, Vendor And Public Web Capabilities and Information
BIG DATA Common Reference Architecture:
Example: RA Technical w/ Applicable Standards And Apps

- Data Storage Infrastructure
  - Oracle, MySQL, DB2, SAP, Accumulo, Cassandra, Hbase, Open-R
  - Amazon S3, Hadoop, Oracle, IBM, Dell, HP, EMC, NetApp, Quantum

- Data Analytics Infrastructure
  - Oracle Grid, VMWare, XEN, Linux Containers, Zones, OpenNebula, OpenStack
  - Oracle, IBM, Dell, HP, EMC, NetApp, Quantum, Cisco

- Data Processing Infrastructure
  - Apache, MySQL, DB2, SAP, Accumulo, Cassandra, Hbase, Open-R
  - Amazon S3, Hadoop, Oracle, IBM, Dell, HP, EMC, NetApp, Quantum, Juniper, Cisco

- Data Visualization Applications
  - SQL, SPARQL, HTML, RDF, XML, TOSCA, BPEL, BPMN, HL7, UN/EDIFACT, OGF’s DFDL

- Visualization Devices
  - SNMP, CIM, IPDR, CDMI, OCCI, LDAP, SAML2, KERBEROS, PKI, KMIP

- Hardware And Communications Networking Infrastructure
  - OSD, SCSI, SATA, SAS, Ficon, SNMP3, CIM, SMIS, HTTP, CIFS, NFS, WebDAV, SCP, S/FTP, AMQP

- Legacy Data, Coalition, US Govt., Partner, Vendor And Public Web Capabilities
  - Legacy Data, Coalition, US Govt., Partner, Vendor And Public Web Capabilities

- Security, Capabilities and Infrastructure Management
  - Legacy Data, Coalition, US Govt., Partner, Vendor And Public Web Capabilities

BIG DATA General Reference Architecture:
BIG DATA High Level Operational Concepts (OV-1)

Traditional Data Processing

External Semi-Structured Data Sources

Structured Data APIs

File Shares

Web APIs

Reports pdfs

Web Pages

Social Media
Forums, Blogs, Twitter

Query API

Ingest Specialist

Data Scientist

Data Analyst

War Fighters

Telemetry

Sensors

Data Entry

Imaging
BIG DATA General Reference Architecture:
BIG DATA High Level Operational Resource Flow (OV-2)

Note the similarities between Traditional Data Processing and BIG DATA

Note BIG DATA includes semi-structured data ingest and semi-structured data relationships.
BIG DATA Common Reference Architecture: e.g. Reference Architecture Mapped to Accumulo/Hadoop

1. **Data Design**
   - Data Scientist
   - Ingest Planning
   - Data Models

2. **Data Ingest**
   - Data Sources
   - Legacy Data
   - Data Ingest
   - Ingest Plans
   - Data Sources ingested into Accumulo as NuWave Tables

3. **Analytics**
   - Analyst
   - MapReduce
   - Enriched relationships generated using MapReduce analytics and stored in Accumulo
   - Data Queries

4. **Utilization**
   - Consumer
   - Widgets/Apps
   - Data Visualization

**Security, Capabilities and Infrastructure Management**

**Visualization Devices**

**Data Processing and Data Storage Infrastructure**

Capabilities and Gaps (Roadmap WG)

Updated: 07.2013
BIG DATA Cloud Enterprise Resource Framework:
BIG DATA Commercial Enterprise Key Capabilities

- Information Interoperability – Any Information From Anywhere
- Identify Same Data Across Different Sources and Time-Shifted From Same Source
- Autonomous Self-Healing Storage/Compute Infrastructure
- Autonomous, Policy Based, Comprehensive Workload Management
- Autonomous System Optimization – App Profiles, Data/Data Processing/Network Performance Tiers
- Standard Capabilities Catalog
- Interoperability Across Vendors Products
- Common, System Wide Event Reporting & Logging
- Application Optimize Through Selecting Best of Breed Technologies
- Reference Architectures – Guides Planning, Design and Deployments
BIG DATA Cloud Enterprise Resource Framework: BIG DATA Defense/Intelligence Additional Key Capabilities

- Generalized Capabilities - not application or program specific)
  - Data Anomaly Detection (ADAMS) (Tampering, Errors, Inconsistencies, Age/Currency)
  - Anomaly Tolerant Query (non-Stochastic, non-Causal Query)
  - Information/Data Confidence Maturity Models
  - Autonomous Security Threat Response and Reporting
  - Multi-Lateral, Multi-Level, Authentication, Authorization, Confidentiality Information Security - Supports Redaction (Dynamic ABAC On Steroids)
  - Real-Time Information Redaction - e.g. Video, Imaging, Audio, Text, File, DB Records, Documents, Paragraphs, Sentences, Words, Personal Information, Other Sensitive Information, Meta-Data
  - High Granularity Data Management – Search, Resilience, Provenance, Geo-location, Replication, Confidentiality, Maturity Models, Life Cycle – Near-line, Offline, Archival, Destruction
  - Processing Using Encrypted Code At Data Site
  - Processing Encrypted Data
  - Operation Over Low Bandwidth, Intermittent, Low Integrity Communications Networks
  - Access to Other Resource Sources - Scientific Grid, OOI, Web Compute Resources (Other Depts Agencies, NGOs, Foreign Govt Agencies, Coalition Partners)
    - e.g. FAA, DOE, NARA, NIH, FEMA, DOI, Foreign Govt. Agencies, Red Cross, Police, Firefighting, Local Volunteers, Municipal Transit, Private Doctors, Pharmacies, Hospitals, Ambulance Services, Oil/Fuel Distribution
  - Alignment With Net-Centric Approaches
  - DoDAF styled BIG DATA Reference Architectures
BIG DATA General Reference Architecture: BIG DATA Commercial Enterprise Key Gaps & Short Comings

- Resource Planning, Deployment, Optimization and Costs
  - Semi-Structured Data Processing Unpredictable Completion Times Makes Scaling, Resource And Budget Planning Difficult
  - BIG DATA Proprietary QLs – Competency/Talent Gap, Rewrite Legacy SQL Reports/Queries, Rewrite Data Warehouse Queries
  - No Best Practices Regarding Applications, Architectures, Operations and Deployments
  - Disconnected Management, Administration and Deployment Tools from Mainstream Drives Up OpEx and Reduces Agility
  - NO Alignment and Leverage with Cloud Data Mgt/Access Standards Without Significant Custom Development
  - Each Unique Data Source Requires Custom Development, Costly Data Scientists Required
  - NO Trade-Off Model for “On the Fly vs. Stored” Denormalized vs Normalized Data
  - NO Integrated Chargeback Tracking/Reporting/Billing for Resource Consumption e.g. Service Levels, Tiers, In Plan, Out Plan
  - BIG DATA Can Be Too BIG To Moved Via Networks From Place of Residence, May Require “Secure Agent Based” Data Processing

- Quality and Data Integrity
  - Emerging Technologies --- NO Quality of Record
  - Poor Leverage/Integration with Existing Storage Infrastructure Management, Data Management and Disaster Recovery
  - BIG DATA Tech. NOT HARDENED, Open Source Funding, Sub-Optimal Reliability (“Kindness of Strangers” Quality Model)
  - NO System Wide Diagnostics i.e. Execution Logging and Traceability, Logging Proprietary per Technology

- Management, Administration and Interoperability
  - BIG DATA Tech. Load Balancing Not Integrated to Cloud/GRID/Cluster Workload Management Tools
  - No Consistent/Common Management and Common Monitoring and SLAs NON-Existent Across BIG DATA Technologies

- Security
  - Authorization Privileges and Enforcement NOT Consistent Across BIG DATA Technologies
  - NO Integrated Third-Party Service/Partner Credential Management
BIG DATA Cloud Enterprise Resource Framework:
BIG DATA Defense/Intel. Additional Key Gaps & Short Comings

- Resource Planning, Deployment, Optimization and Costs (generalized- not application or program specific)
  - Proprietary APIs and Mgt Tool Make Optimizing Applications and Technology Adoption Cost Prohibitive
  - NO Reference Architectures to Guide Deployments e.g. Strategic, Applications, Cloud, Partner Interoperability
  - Each Unique Data Source Requires Custom Development, Costly Data Scientists Required
  - NO Trade-Off Model for “On the Fly vs. Stored” Denormalized Data
  - NO Time Deadline Based Resource Provisioning, Acquisition and Workload Management
  - NO Workflow Synchronization to External Systems and No Control of External Data Processing Without Custom Development
  - NO Knowledge/Information/Data Virtualization and Interoperability Standards: New data Types Require Custom Development
  - NO Comm. Channel to Data Type Awareness and Over Low Bandwidth, Intermittent, Low Integrity Communications Networks

- Quality and Data Integrity (generalized- not application or program specific)
  - BIG DATA TECHNOLOGIES ARE NOT DESIGNED FOR LIFE-CRITICAL APPLICATIONS
  - BIG DATA Intolerant Intermittent Data Availability and Anomalous Data and Data Processing
  - NO Integrity Management –ie confidence models, currency models, monitoring and data validation, “End to End” Data Integrity Enforcement, Config. Mgt
  - NO System Resiliency Repair, Recovery and Validation Tooling

- Management, Administration and Interoperability (generalized- not application or program specific)
  - Query and Search, Catalogs, Languages Inconsistent and DO NOT Interoperate Across BIG DATA Technologies
  - Query Results DO NOT Interoperate Across BIG DATA Technologies Without Custom Development
  - No Interoperation with Standards: Cloud, Data Management, Storage Management, Deployment Configuration,
  - No Standards for Capability, Service and Data Catalogs: Joint, Packages, Coalition Contribution

- Security (generalized- not application or program specific)
  - NO Integration with Third-Party AA/Confidentiality Systems e.g. User, Rank, Clearance, Partner, Storage, Partner/Vendor Data Services, Multi-Tenant
  - No Granular Confidentiality On Data, Multi-Tenant Isolation/Secure Separation
  - NO Threat/Data Tampering Detection, Std. Reporting and Response
  - NO Processing Encrypted Data and Encrypted Queries
  - NO Granular Redaction for Raw Data, Queries and Reports ie Video, Imaging, PII, Scans, Documents, Paragraphs, Text, Audio
  - NO Dynamic Authorization e.g. Geo-Location, Access Device, Environment Risk
BIG DATA General Reference Architecture:
Possible Applicable Commercial/Enterprise Functional Standards

- Identity/Security – SAML2, LDAP, PKI, X509, SSL, KMIP
- Authorization – SAML2, VOMS, Shibboleth
- Systems Monitoring – DMTF/CIM, SNMP, ISO X.700-CMIS/CMOT, JMS
- Billing Records -TMF/IPDR
- Cloud Resource Mgt – OGF/OCCI, DMTF/CIMI-OVF, IEEE-P2302(Intercloud RA)
- Grid Resource Mgt – OFG specifications, Globus Specifications
- Data Management – SNIA/CDMI, OASIS CMIS, OGF specifications
- Storage Management – SNIA/SMIS
- Storage Interface – OSD, SCSI, SATA, SAS, iSCSI, Ficon
- File Sharing – CIFS, NFS, HTTP, WebDAV, SCP, S/FTP
- Service Protocols – OMG CORBA, REST, SOAP, SOA
- Application Configuration Deployments – OASIS TOSCA
- Infrastructure Configuration Deployments – DMTF CIM
- Data Services – OASIS WSDL WSRF, OGF DFDL specifications
- Data Expression – W3C XML, RDF/a, JSON, RSS, Mitre/NIST CEE family
- Document Formats – PDF, HTML, ODF, SMIL, UN/EDIFACT, many others
- Query Languages - SQL, W3C SPARQL, Xquery/Xpath
- Messaging – SNMP, OASIS AMQP, XMPP, ESB
- Service Agreements – OGF GRAAP, WS-Agreement
BIG DATA General Reference Architecture: Opportunities For New Functional Standards

- What We Know Today, Ten (10) Key Gaps In Standards for BIG DATA Capabilities

1. Information/Data Interoperability Interface Specification (information structure/translation)(increase data utilization)

2. Information Confidence Grading Specification (trust results)

3. RESTful Cloud Object Management Interface Specification (to drive other new interface specifications)

5. RESTful URI Search/Query Interface (CDR work?) (reduce dev/ops costs, increase deployment options)

6. Data Virtualization Interface Specification (reduce dev/ops costs, increase deployment options)

7. Infrastructure Management Harmonization Interface Spec. (reduce mgt costs, policy based, autonomic data center mgt)

8. Cloud PAAS/SAAS Management Interface Specification (for workload mgt, improved security)

9. Compute/Data Resource Confidentiality/Authorization Interface Specification (system security)

10. Natural Language Query Specification (extend info harvesting to imaging/video, integrated redaction)
